

“Medscape National Physician Burnout, Depression & Suicide Report 2019”

Carolyn Buppert, MSN, JD
Medscape Nurses, May 2017

- 44 % of physicians report feeling burned out; 11% were colloquially depressed and 4% were clinically depressed.
- Many factors can cause burnout, but by far, having too many administrative tasks as well as working long hours, working with EHR's, lack of respect and insufficient compensation are major players.
