- **Christos Zaharas, MBA** – Vice President of Operations
- **Louis Farrell, MD** – Director of Training + Technology
- **Nicole Bramblett, MHA** – Client Relationship Manager
- **Alyssa Meza** – Senior Manager

## ABOUT SCRIVAS

Founded in 2014 by Dr. Fernando G. Mendoza, a Board-certified doctor in pediatrics and pediatric emergency services, Scrivas, LLC provides COVID-10 screening and contact tracing services for schools, businesses, and healthcare facilities who seek to help control the spread of the virus, along with its core business of in-person and virtual medical scribe services for physicians and hospitals.

In response to the COVID-19 pandemic, Scrivas launched a new exposure management platform using technology coupled with personalized oversight by its healthcare workforce, to track infected, symptomatic, and exposed students and/or staff and help forecast potential student absences and staffing needs. The contact tracing program works in conjunction with a school or business's personalized reopening protocols.

## WHAT IS SCRIVAS' CONTACT TRACING PLATFORM

Scrivas' contact tracing platform is a *turn-key* management service that allows schools and businesses to focus their attention on what matters most, while the platform leverages highly-trained contact tracers to monitor individuals when they've been exposed or test positive for COVID-19, and clearing them for a safe return to school and work.

## HOW IT WORKS

The company's user-friendly *COVID Exposure Management Platform* consists of a contact tracing and screening process anchored by a dashboard that can be customized to collect any information deemed important by a school administrator, medical consultant, or business. The data collected feeds the dashboard and provides a snapshot of the status of a school or company's affected population.

In addition to the dashboard, Scrivas provides a mobile-friendly web application for everyday screening for students, faculty, and employees. Anyone who tests positive, calls in sick, or self-identifies is automatically entered into Scrivas' secured HIPAA-compliant LIVE dashboard, which is visible to the schools and business administrators and Scrivas contact tracers.

Scrivas' contact tracing platform is augmented with live contact tracers who monitor the health of affected students, faculty, and employees every 48 to 72 hours, guiding them through the quarantine status and continually updating a safe return to school and work timeline. The information collected is kept in the LIVE dashboard, so that administrators or a company management team can identify any potential outbreaks or hotspots.

#### **WHY IT WORKS**

The highly effective contact tracing platform goes beyond what technology or a simple app can provide. Scrivas' *COVID Exposure Management Platform* provides live support with real-time monitoring and tracking, thus removing unnecessary time spent and minimizing the stress on a school or business.

The Scrivas team has extensive experience dealing with and handling face-to-face patient encounters and working with multiple patient software platforms. This experience allows Scrivas' contact tracers to interact with the exposed student, staff, or employee with a professional demeanor, expressing empathy, and understanding as they gather the necessary data and advise on the next steps in the process. The team provides support not only to those exposed but to the school or business as well by allowing them to focus on their day-to-day responsibilities.
